(a)
$R = \sigma(\Delta\hat{a})/\sqrt{s_t^2 + s_{t+1}^2}$
CRISP 09:49 (median 1.01)
CRISP 10:10 (median 0.98)
pair of consecutive scans
(b)
CRISP2 08:01
CRISP2 10:52
observed $\sigma(\Delta\hat{a})$ in tile overlaps [G]
predicted $\sigma(\Delta\hat{a})$ [G]
open: noise $\propto I$
filled: measured per-$\lambda$ noise
